Week 10 – Questions

1. Logie and Duff (2007) investigates the relationship between processing and memory span. What is memory span and what do they find about its role in working memory?

2. Martin and Hamilton (2007) propose a model of working memory that has striking differences from the original model proposed by Baddeley. On what evidence do they propose their new model?

3. How is their model different?

4. What is the main idea underlying Marklund and Nyberg (2007)?

5. How might their assertions affect our thoughts about foreign language learning?
